

FAASTeam of the PHL FSDO 17 presents:

Don't Go Bump in the Night

Night-flying has always been, and continues to be, more dangerous than flying during the day. This is, for the most part, because of a lack of visual cues and our vulnerability as humans to be affected by illusions. Historical accident data indicates that not only does the risk of specific types of accidents increase at night (in the form of dark-night takeoffs, inadvertent VFR-into-IMC, CFIT, black-hole illusion), but also that these accidents are usually fatal. In this presentation, you will gain a thorough understanding of the hazards that cause accidents during night operations and receive practical preventative measures you can immediately apply to keep you safer when the lights go out. Don't miss this critical and informative presentation! Click the ink below and register TODAY.

Directions: The Air National Guard Entrance in at the intersection of Route 141 and Commons Boulevard. Proceed to the Guard Security Gate, and you will be directed to the Main Theater Facility. Anyone needing assistance can contact me directly on my cell phone provided in this notice.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.
